# Custom Shopify theme build with modular configurator

Proposal for Vitae Glass

---

Prepared for: Gordon Loi, Vitae Glass

Prepared by: Paul Scolieri, Lever Agency

Date: June 2026

## 1. Overview

---

Vitae Glass is a direct-to-consumer borosilicate glass brand built around a proprietary modular bong system - components snap together interchangeably, so customers can customize, upgrade, and repair their setup over time. Their Shopify store handles all DTC sales across pre-built bundles and individual components. This engagement covers a full custom Shopify theme build, a bespoke Build Your Own configurator, and a complete site refresh designed around conversion and mobile performance.

## 2. Problem

---

Vitae's core differentiator is the modular system - the ability to build, upgrade, and customize a piece over time. But the current Shopify theme wasn't designed with that story in mind. The navigation structure makes it difficult for customers to move fluidly between components, bundles, and the Build Your Own experience. The configurator - the feature with the highest potential to increase AOV and drive repeat purchases - doesn't have a clear home in the current layout. A site rebuild organized around how customers actually shop the system, with streamlined navigation and a purpose-built configurator flow, creates the conditions for the modular concept to drive conversion the way it was designed to.

## 3. Solution

---

I'll build a custom Shopify theme on top of Dawn - Shopify's base theme - giving Vitae a fast, clean, fully branded storefront that Gordon can manage in the theme editor without a developer. The centerpiece is a step-by-step Build Your Own configurator that walks customers through selecting components in the right order, surfaces compatibility guidance and function explanations at each step, and surfaces upsells after the core build is in the cart rather than during it.

The design direction is already established from the Next.js demo: minimal, warm, conversion-focused - closer to Yeti or Vessel than a smoke shop. Every page is built mobile-first, and every integration Vitae already uses (Klaviyo, Stamped, Rep AI, GA4, Meta Pixel) will be wired in at launch.

The configurator is the real unlock here. Right now Build Your Own is a differentiator that almost no one uses because the path to it is buried. A guided, step-by-step flow that explains the system as it goes is what turns a \$300 starter sale into a \$500 build - and sets up the email sequence to bring them back for a second percolator.

## 4. Scope of Work

---

### Deliverables

- Custom Shopify theme built on Dawn - fully branded, mobile-first, no premium theme dependencies
- Homepage: video hero, press marquee, modular system explainer with Build Your Own CTA, how-it-works section, best sellers, cleaning/sustainability section, customer reviews, email capture
- Collections / Shop page: filter bar (bestseller, price, difficulty level), default sort by bestselling, clean grid layout
- Product Detail Page: sticky Add to Cart, multi-angle images, product video support, specs and dimensions, included components, compatible components display, Recently Viewed, Stamped reviews integration
- Build Your Own configurator: guided 4-step wizard (Mouthpiece, Percolator, Base, Connector Ring), optional percolator add-ons with automatic connector ring logic, compatibility indicators and function explanations at each step, preset bundle shortcuts (Starter, Comfort, Master, Dab Set), post-build upsell prompt after cart add
- About / Why Vitae page: brand story, sustainability program (1 tree per module), brand pillars, founder and product imagery

- FAQ page: client-editable via Shopify admin without a developer (metaobjects or section schema)
- Contact page: inquiry form (Name, Email, Order Number, Inquiry Type, Message), Instagram, email, and Rep AI live chat
- Blog: index page with featured/hero post, post template, category structure (Cleaning Guides, Product Education, Cannabis Education, Product Releases, Sustainability, etc.)
- Wholesale page: reskinned with existing copy and structure, MOQ and margin info, best-selling product callouts, wholesale FAQ, registration CTA (existing pop-up form retained)
- Google Analytics 4 and Meta (Facebook) Pixel setup
- Stamped reviews and Rep AI live chat confirmed working on new theme
- Typography refresh: Newsreader (serif) and Red Hat Display (sans-serif) implemented site-wide
- Site-wide QA across mobile and desktop before handoff

#### What's Not Included

- 3D visual configurator showing an assembled build render as components are selected - requires 3D asset creation and significant additional scope (Phase 2)
- Scroll-driven animations or parallax effects beyond standard transitions
- Product launch landing pages with heavy animation (Apple-style marketing pages) - recommended as a future add-on per product release
- TikTok Pixel - not at launch per client direction
- Heatmap tracking tool setup (low priority, can be added post-launch)
- Copywriting or content creation for any page - existing copy and product descriptions will be used as provided
- 3D render asset creation for product imagery
- Shopify data migration, product catalog cleanup, or historical order data changes
- Ongoing maintenance or post-launch support beyond a 2-week bug fix window

## 5. Timeline

| Phase                      | Duration | Description                                                                                                                                               |
|----------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Kickoff & Theme Foundation | Week 1   | Final scope confirmed in writing, Dawn theme configured, global styles and typography (Newsreader + Red Hat Display) applied, and base layout scaffolded. |

| Phase                       | Duration  | Description                                                                                                                                                                    |
|-----------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Homepage                    | Weeks 2-3 | Homepage built end-to-end - video hero, press marquee, modular system explainer, how-it-works section, best sellers, and email capture. Reviewed with Gordon before moving on. |
| Core Pages                  | Weeks 4-5 | Collections, PDP, About, FAQ, Contact, Blog, and Wholesale pages built. Integrations (GA4, Meta Pixel, Stamped, Rep AI) wired in.                                              |
| Build Your Own Configurator | Weeks 6-7 | Configurator wizard built: step flow, compatibility logic, connector ring automation, preset shortcuts, and post-build upsell prompt. Full flow tested end-to-end.             |
| QA, Revisions & Launch      | Week 8    | Full site QA on mobile and desktop, revision round incorporated, Gordon signs off, and theme is published to live store.                                                       |

Work begins upon receipt of deposit. Target delivery is within 8 weeks, with launch targeting August/September 2026. Product copy, images, and any page content not already in the Shopify media library should be confirmed or flagged as placeholder before page builds begin.

## 5b. Completion Criteria

1. All 9 pages (Home, Collections, PDP, Build Your Own, About, FAQ, Contact, Blog, Wholesale) are live on the Shopify store and render correctly on mobile and desktop
2. Build Your Own configurator completes a full 4-step build, adds all selected components to the cart as individual line items, and surfaces the post-build upsell prompt
3. Connector ring logic adds the correct number of rings based on percolators selected
4. Preset bundle shortcuts (Starter, Comfort, Master, Dab Set) pre-populate the configurator correctly
5. FAQ entries are editable by Gordon in Shopify admin without developer access
6. Stamped reviews display correctly on PDP and Rep AI live chat loads on all pages
7. Sticky Add to Cart is present and functional on PDP on mobile
8. 2 consecutive end-to-end test orders through the configurator complete without errors

## 6. Investment

| Milestone                 | Description                                                                              | Amount  |
|---------------------------|------------------------------------------------------------------------------------------|---------|
| Deposit - Project Kickoff | 50% deposit due before work begins. Covers theme setup, homepage, and core page builds.  | \$2,500 |
| Final Payment - Launch    | Remaining 50% due upon completion of QA and before theme is published to the live store. | \$2,500 |
|                           | Total                                                                                    | \$5,000 |

50% deposit due at project kickoff, 50% due upon completion before go-live. Work begins upon receipt of deposit.

### 6b. Phase 2 – Future Additions

The following items were discussed on the call and are explicitly out of scope for this phase, but are available as a follow-on engagement once the core site is live and conversion data exists: - 3D visual configurator: a real-time assembled build preview that updates as components are selected.

Requires 3D renders of each component category and a compatible rendering approach.

Recommended once the core configurator is validated and higher-ticket build rates are confirmed. -

Product launch landing pages: Apple-style scroll-driven marketing pages for new product releases.

These live separately from the main PDP and are designed to introduce a product with motion and storytelling before directing customers to buy. Best deployed per launch rather than as a permanent site feature. - Scroll-driven animations and parallax effects: available as a targeted enhancement once performance benchmarks are established and specific use cases are identified. Paul is available to scope any of these as separate projects after Phase 1 is complete.

## 7. Legal

### INTELLECTUAL PROPERTY

Upon receipt of final payment, the Client owns all custom business logic, data, and project-specific deliverables produced under this agreement. Lever Agency retains ownership of all underlying frameworks, reusable components, proprietary processes, and non-business-specific development assets, which may be reused across other projects.

#### PAYMENT TERMS

This project follows the milestone-based payment structure defined in Section 6. Each milestone is invoiced upon delivery and client approval of that phase. All invoices are due within 5 business days of issue.

#### REVISIONS & SCOPE

This proposal covers the scope explicitly defined above. Any requests outside the defined scope will be treated as a change order and quoted separately. Lever Agency will flag scope changes before proceeding.

#### POST-LAUNCH SUPPORT

Lever Agency provides a 30-day bug fix period following final delivery at no additional cost, covering defects directly related to the agreed scope. Ongoing maintenance, feature additions, and third-party integration issues fall outside this window and must be scoped as a separate engagement.

#### GOVERNING LAW

This agreement shall be governed by the laws of the Commonwealth of Pennsylvania.
